Business Case for Transformation

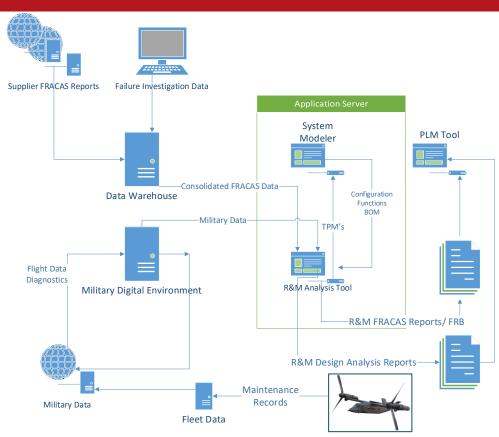

- What information is needed in the model?
- Who will use the model?
- What data will be used?
- What level of detail is needed?
- How will changes be communicated?
- How will data be reported to the customer?
- How will the digital environment impact the efficiency of product design and sustainment?

Goal: Increased Speed and Efficiency in R&M

Transformation Due To Data/ Data Systems

- Types of Data:
 - Supplier FRACAS Data
 - Prime Contractor FRACAS Data
 - Customer FRACAS Data
 - Contractor Reliability Life Models/ Predictions
 - Bill of Materials/ System Hierarchy
 - Reliability Analysis Results/ Reports
 - R&M Test Data
 - R&M Technical Performance Measures (TPMs)
 - Maintainability Handbook Data
 - Maintainability Results

- All R&M engineers must use and navigate architecture software
- Engineers must know what data is included in model and how often it is updated
 - Configuration Management
- Must have capability to setup what-if models for trade studies
- Evidence of success: able to pull R&M reports from MBSE tool
 - MTBF, MTTR, Availability TPMs
- Build MBSE R&M model such that it supports system functionality

Goal: Implement transformation so that DE is Integrated with R&M Engineering
